

TWINY 1.1

Wireless A/V receiver and transmitter

Product codes

TWINY 1.1: 23500052

The TELE System Audio/Video receiver and transmitter is now available in a brand new design. The TWINY1.1 enables transmitting any kind of audio/video signals from all devices connected to your main TV to a second television. Only a few minutes are necessary to place the kit containing two devices and start receiving the audio/video signals of your video player, satellite or terrestrial receiver, dvd player or stereo system through a wireless connection on another TV. The 2.4 GHz transmitting frequency ensures a high audio/ video quality and the possibility to receive the signal up to 100 meter (without obstacles).

Twiny 1.1 is also a remote control extender to operate most audio/video devices directly from a second television.
